

ROSEWOOD
IRRIGATION SERVICES

Helping Gardens Thrive

*Rosewood are garden irrigation specialists.
A family-run business based in St Albans,
we design and install automated watering systems,
customised to help your garden to flourish.*

■ We believe that when your garden is your haven, you should spend more time savouring it and less time watering it. Maximum enjoyment for minimum effort. That's where we come in.

An engineering mindset means that we can design the most effective and efficient systems. Never overcomplicated. Never over engineered. We simply give our customers exactly what they need.

Our team is the foundation of our business. Each and every member shares our values and cares enough to do the little things. Taking off our boots. Showing up on time. Making sure our customers come away from every conversation with a smile. Because we've found that the little things can be the big things.

We take the hassle out of watering, because we believe your garden should be a source of joy and something that you love. Save time, save money, save water and have peace of mind knowing that your garden has what it needs to thrive.

"The boys were absolutely brilliant... happy and smiling and nothing too much trouble. Great customer service. I can sit back and watch my baskets flourish."

"...my back garden won the annual garden competition – thanks to your irrigation system!"

"I am delighted with the result and it is definitely money well spent. Could you please convey my thanks to Andy and his team? I shall certainly be singing their praises to my friends!"

Why Irrigate Your Garden?

*The decision to irrigate your garden can feel like a daunting one.
Will it be worth the time, effort, disruption and investment?
Here are some of the ways investing in an irrigation system has
benefitted the lives of our customers.*

Convenience.

Sometimes, making sure your garden is watered can feel like more of a tie than a joy. Before irrigation, some of our clients spent up to two hours watering each night. Installing an automated irrigation system has allowed them to enjoy a thriving garden whilst freeing themselves from the commitment to watering.

Freedom.

Many of our customers love to travel, some for work and some for pleasure. Without irrigation, they simply would not be able to have a thriving garden. However, with an irrigation system installed, their gardens can still be watered when they are away from home. We even offer systems which come with a mobile app, allowing you to give your garden a little boost, wherever you are in the world.

Plant Health.

If you choose to invest in a Rosewood irrigation system, we are sure you'll have no regrets. Our customers tell us their expectations have been exceeded in every way. Plants flourish and flower where they never have before, leaves and petals are fuller and healthier. Some of our customers have even gone on to win prizes for their plants and vegetables. Your plants will reward you for delivering the optimum amount of water at the right time.

Sustainability.

An irrigation system is up to 90% more efficient than traditional watering. In fact, it's so efficient you can keep your drip-lines running even under a hose pipe ban. Our irrigation systems utilise natural water sources wherever possible, with designs that massively reduce water loss by considering things like run-off, wind and evaporation. We make sure the water you do use has minimal impact on the environment and optimal impact on your garden. Now that's something to feel good about.

Fully Automated Systems

OUR SERVICES

Full-Service Garden Irrigation.

At Rosewood we offer full-service garden irrigation, which means we take care of everything. Starting from the initial consultation, to the bespoke design and installation of your system, right through to the ongoing maintenance. Every service is carried out in-house by our skilled, reliable and committed team, so you can be confident that a Rosewood irrigation system will help your garden to thrive for years to come.

Irrigation For Every Garden.

Each garden is individual and we love the challenge of working with smaller spaces as well as larger ones. Some have acres of lawn, some showcase a wide array of flowers, while others grow award-winning vegetables. Whether you have a courtyard or a country estate, your garden looks best when it is thriving, lush and green.

Good design is crucial to the effectiveness of an irrigation system and this is what sets us apart. Our system designer and company director Andy has a background in civil engineering and waste water management. We use this knowledge to create the most effective and efficient systems, customised to suit the individual needs of your garden.

Living Walls.

When You Can't Grow Out, Grow Up.

If sprawling lawns and lush flower beds are not a reality for you, do not despair. Our sister company, Rosewood Living Walls, can design, install and irrigate a bespoke living wall. By using the vertical space to your advantage, even the most minuscule garden can be filled with life and colour – without taking up valuable square footage on the ground. Balcony, city garden, roof terrace or courtyard: with a Rosewood Living Wall, any patch of land can become a space to be proud of.

If you want to bring your love of house plants to the next level, we also design and install interior living walls so you can bring the outdoors in, breathing life into any room.

Each of our living walls is unique and personalised to you. From mediterranean kitchen gardens to tropical interior walls, we take into account the growing conditions and select plants that you can be sure will thrive.

When you grow up instead of out, every space no matter how small, can be a sanctuary from stress. A place to relax, recharge, entertain and enjoy.

Hassle-Free Vertical Gardening.

In the past, living walls have been notoriously difficult to maintain, but no more, thanks to PlantBox.

This stackable, vertical garden system combined with our automated irrigation means a totally hassle-free living wall. A modular system means you have complete flexibility with the height and width of your living wall. This system can be fixed to almost any surface, both internal and external. It can add privacy, disguise eyesores and inject greenery into the smallest of spaces.

Let us design, install and irrigate your living wall. Visit www.rosewoodlivingwalls.co.uk to find out more or call us today to schedule a free survey.

"The service was impeccable. They worked efficiently as a team and by lunchtime the living wall was fully planted and irrigated. They tested everything and tidied up thoroughly so the garden was ready to enjoy straight away"

"I am delighted with my new living wall which has totally transformed my small garden space."

"I specified that I wanted to incorporate some flowering plants to attract bees and wildlife and I also wanted some herbs for a vertical kitchen garden. Rosewood really understood my brief... The very first day it was installed we photographed bees on the flowers."

OUR SYSTEMS

The Best Brands. The Latest Technology.

A Rosewood irrigation system is designed to be completely automated, so you don't have to do anything. We use the best-quality irrigation components and, wherever possible, we prefer Rain Bird. Their products are designed to be defect-free, but if a problem should arise, are fully guaranteed. We also offer wifi-enabled systems which allow you to override the automatic program using the Rain Bird mobile app. If you need to give your garden extra water, it can all be done from your phone, allowing you to water your garden from anywhere in the world. A Rosewood irrigation system means you'll be fitted with the best in the business.

Taking Care Of Your System.

We offer a seasonal maintenance service. This involves shutting down your system for the winter months and then restarting it in spring. We check parts and replace them on the rare occasion that it's necessary, thus ensuring a faultless performance through the spring and summer.

"I was so impressed with the quality of the work: very efficient, nothing too much trouble, everything tidied up despite belting rain. I only wish more companies were like yours!"

"I partly chose Rosewood because of the glowing testimonials and it was a wise choice. I am delighted... it will save me countless hours and greatly improve results. Andy, Hugo, Steve and the team were a pleasure to deal with and did a first class job... My only regret is I did not discover Rosewood earlier."

"We are very happy with the new installation. Andy and Steve were fantastic and so nice and friendly to have around. The system is working brilliantly so far! Thanks a million again."

“Andy kept us completely in the picture, right from his first visit... We felt completely safe in his hands and the results are fantastic.”

“It has been a pleasure to do business with you... polite, efficient and... you said what you would do and then did what you said... increasingly rare and a delightful surprise when it happens .”

“Thank you to you, Andy and the team. These guys were brilliant... very punctual and excellent professionalism. They left our garden very clean and tidy and of course, a fantastic irrigation system.”

HOW WE WORK

What you can Expect.

We do all we can to make sure any disruption during installation is kept to a minimum. Each and every member of our team cares enough to do the little things, like showing up on time and taking off our boots. Because we've found that when it comes to our customers' homes, the little things can be the big things.

Where needed, turf is lifted in neat squares that are then kept in order, ready to re-lay. A narrow trench is carefully dug to lay the pipework, after which the trench is back-filled, the soil compacted, and the turf replaced exactly where it was. Any outlines of where the turf has been cut will have disappeared within a few days.

Survey.

Our system designer will make a visit to your home to survey your garden, getting to know the needs of your outdoor space, plants and your own individual preferences.

Design.

We produce a bespoke design that is perfectly suited to your garden. This will reflect its size and shape, the type of plants you have, the available water pressure and also how you would like to use your outdoor space. This ensures your system is as efficient and effective as possible.

Quote.

Based on the design we will then prepare a quotation for you, which comes with absolutely no obligation. Once any queries you have are ironed out and the quotation has been agreed, we will schedule your installation for a time that works for you.

Install.

Each installation is attended by a senior team leader, as well as our friendly and diligent team. We'll be there to talk you through each step of the project, and even after completion we're happy to answer any questions you might have.

CASE STUDY 1

A Small But Charming Garden.

This newly landscaped garden was designed with convenience in mind. A low-maintenance planting scheme had already been chosen and with the addition of a drip-line irrigation system to all of the beds the owner could simply enjoy her new garden without having to worry about watering it.

Even smaller spaces can really benefit from the right irrigation system, as this garden demonstrates.

Guide Price: £2,000 - £2,900

CASE STUDY 2

A Traditional Courtyard Garden.

Each of the pots and hanging baskets in this garden is irrigated with either micro drip-line or individual pressure-compensating drippers. This allows each single zone of irrigation to be completely balanced, so both large and small pots can be watered at the same time without over or under-watering.

The result is a truly low-maintenance garden that doesn't need to compromise on charm or character.

Guide Price: £3,200 - £4,200

CASE STUDY 3

A Suburban Haven.

A system of automatic pop-up sprinklers ensures this immaculately kept lawn remains healthy and green even in dry spells.

The majority of the borders and beds are drip-line irrigated for low-maintenance care, however the owner wanted to reserve one bed where he enjoys getting creative and regularly changing the planting scheme. We will always consider how you enjoy using your garden and tailor the system so it works perfectly for you.

Guide Price: £8,000 - £11,000

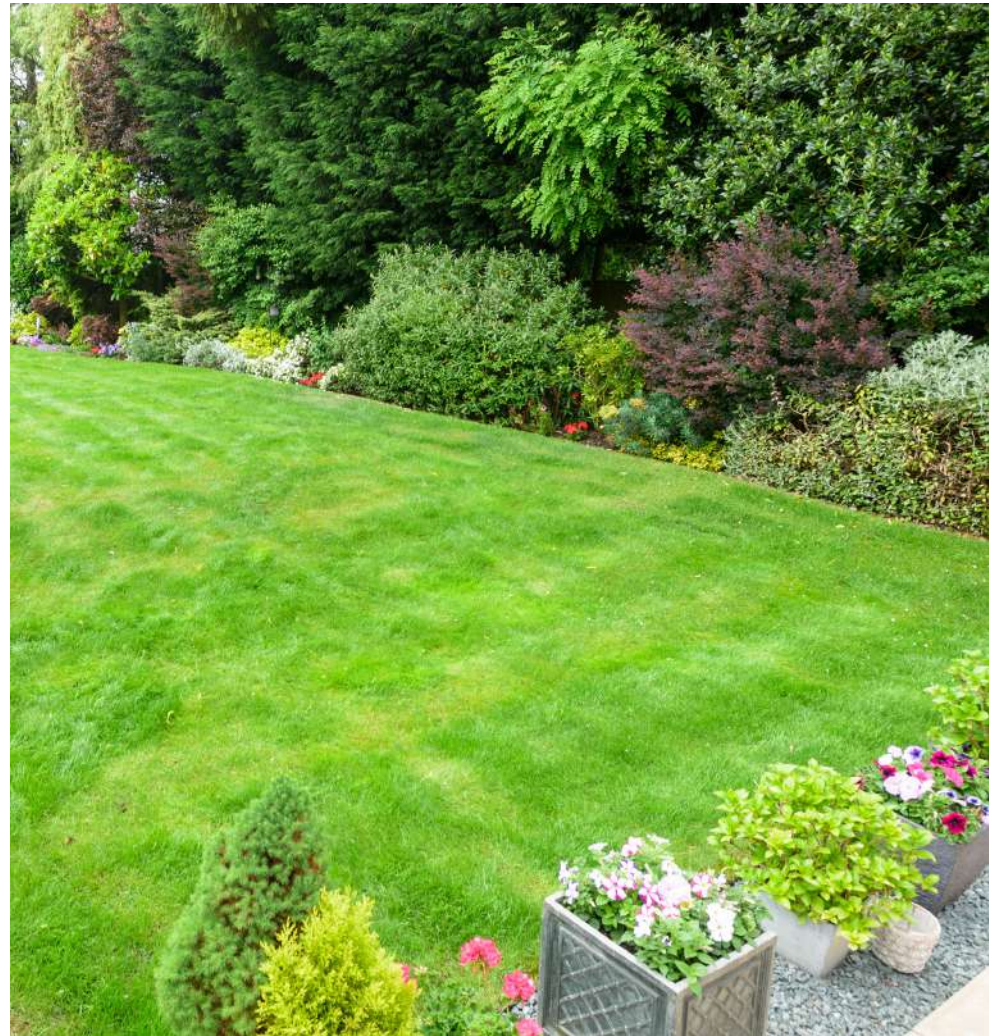

CASE STUDY 4

A Lush Green Lawned Garden.

Sometimes, because of damage caused by foxes and other wildlife (as well as over-enthusiastic gardeners) drip-line irrigation is not the best solution. On this occasion we opted for a reliable system of automated pop-up sprinklers on the lawn, which also over-sprayed the borders. Rotary or rotator pop-up sprinklers are designed to mimic natural rainfall without any harsh jets of water. This means they are the ideal option to protect your plants whilst helping them thrive.

Guide Price: £10,000 - £14,000

CASE STUDY 5

A Contemporary Family Home.

This striking and contemporary garden needed not only to look good, but also to fit in with busy family life.

The lawn is kept vibrant and green year round with an automated pop-up sprinkler system. Drip-line irrigation was installed to all beds and borders along with a tree root watering system to ensure the pleached trees are well cared for.

Guide Price: £11,000 - £15,000

CASE STUDY 6

A Countryside Retreat.

A mature garden split into twelve zones, the wide variety of planting required a multi-faceted system that would make sure every plant and every corner of the garden was getting exactly what it needed. The system features individual pressure-compensating drippers to pots and baskets, drip-line irrigation to all borders as well as pop-up sprinklers to lawns.

Guide Price: £17,000 - £23,000

WHY CHOOSE ROSEWOOD?

Family Owned. Family Run.

We have grown our business slowly, only hiring people who we are sure will be just as devoted to customer satisfaction as we are. Our company founders, Andy and Victoria Leaver, are the heart and soul of Rosewood. Their dedication to our customers sets the standard for the whole team. This means we can rely on every member of our team to uphold our high standards of work consistently, leaving our customers delighted with our service. We put so much trust in our team's ability to deliver, that we happily connect each new customer with some of our recent and long-standing customers for references, confident that they will receive a warm recommendation.

Visit Us.

Our office on Hatfield Road in St Albans is a welcoming environment where you can have a demonstration of our systems on our double-height living wall. It also gives you the chance to meet us in person over a cup of coffee, so you can ask us any questions you have. We want to ensure you have full confidence that we are the kind of people you'll want to take care of your garden irrigation and that we can deliver everything we promise.

Please give us a call to arrange an appointment - we really look forward to meeting you.
